A novel protein modifying enzyme : protein-glutaminase	6
The current status of “green chemistry” in Japan	7

From the Editor,

The world exposition, EXPO 2005 AICHI, is scheduled to open in Aichi Prefecture, Japan on March 25, 2005 and run through September 25, 2005. The theme of EXPO 2005 AICHI is “Nature’s Wisdom”. Nature, the source of all life on earth, has bestowed wisdom on mankind enabling us to develop the technologies that made our modern industrial world possible. However, this wisdom was not given to mankind to wreak irreparable damage to the environment. The purpose of EXPO 2005 AICHI then is to provide a pause in our frantic pace to develop new technology and reflect once more on “nature’s wisdom” to find a more harmonious relationship between technology and our environment. Technology is not inevitably harmful to our environment and the future of mankind is very much dependent on finding this new balance.

Throughout history Japan has been very conscious of nature as expressed in Japanese art and culture. However, because of the lack of land and natural resources and very rapid industrialization, Japan has experienced a rapid deterioration of the environment. Amano Enzyme Inc. believes that as a supplier of specialty enzymes we can play a part in re-establishing a balance between technology and nature. Amano believes that enzymes, which are nature’s catalyst, express “nature’s wisdom” and offer an environmentally friendly alternative to many industrial processes. Amano, with its head office in Aichi Prefecture, proudly sponsors EXPO 2005 AICHI.
